Place close to Connector  
Pseudo differential RGB signals should be routed from the ASIC to the display connector without switching reference plane or running over split plane

SYNC and DDC should be routed from the ASIC to the display connector without switching reference plane or running over split plane

Very important to meet HDMI compliance requirements  
Capacitance of SDADC\_HDMI & SCLDDC\_HDMI nets to Power/GND planes must be less than 50pF (try to make it lower)

55mA current limited +5V rail
